## ***Jammer Hollywood and Speedster Handlebars for Springers***

Those of you familiar with old iron will remember these handlebars used on 36-57 models. Originally designed to use piano wire style internal throttle and spark advance cables, we've updated them for use with pre-82 controls and fitment to our Jammer or other aftermarket "inline" Springer front ends. Simply remove the top tree and install the bars in its place... instant Cool! Both styles are made of 1" tubing, are undimpled, measure 36" from tip to tip, have a 6" rise and feature cable exit holes for those using our internal clutch and throttle assemblies shown elsewhere. The "Hollywood" handlebars feature the crossbar while the "Speedster" handlebars do not. Both styles are truly retro inspired, and available either black powder coated or chrome-plated. The "Hollywood" style bars are featured on our "Delta 88" build. Made exclusively for Jammer right here in USA by Paughco.

## S&S High Performance Tappets for Twin Cam Engines

These tappets are standard equipment in the new S&S 124" engines, and are a good choice for any stock or high-performance application. Whether you have a stock 88 incher or the most outrageous big inch engine with a radical cam and spring combination, these S&S tappets are built to take it. Includes the HL2T Limited Travel Kit for improved cold starts and high rpm valve timing accuracy. Fits all Twin Cam engines from 99-14.

**601729** Tappets (set of 4)

Note: Requires the use of adjustable pushrods.

CATALOG EDITION 44 PAGE 967

## S&S Quickee Pushrods

S&S developed a pushrod with a new adjuster for use with S&S Shovelhead tappet guides. It turned out to be such a cool idea that it is now available for Twin Cam and Evolution engines. The threaded adjuster screws into the pushrod until the threads disengage and the adjuster simply slides into the pushrod making installation or removal a snap. Once the pushrod is installed and adjusted, the lock nut prevents the adjuster from moving. The ball ends of the pushrods are drilled so that oil can flow through them. This is the stock oiling system for Evolution and Twin Cam engines, but this allows Shovelhead engines to be set up with 84 and later top end oiling, via the pushrods, provided S&S Shovelhead tappet guides and roller rocker arms are also used.

**601753** Fits Twin Cam engines up to 124" from 99-14

Note: These pushrods may not be used with solid tappets.

## **BDL 3" Belt Drive Kits with Billet Motor Plates**

Beefy, one-piece 6061-T6 polished billet motor plate locks the tranny and engine together. Kits are available with an optional oil filter mount centered in the motor plate. The fanning condition set up by the spinning pulleys and belt creates extra cooling for the filter, and the kit allows the oil lines to be hidden out of the way. All of these kits include a 3"-wide belt drive unit with polished pressure plate, double-row sealed mainshaft bearing, polished aluminum side plate and pulley covers, and a complete 'Competitor Clutch' with Kevlar plates. For installation in wide frame/tire applications, choose the appropriate insert to space the front pulley out for your particular frame and driveline combination.

### Ride-On Balancer & Sealant

Not Another Tire Sealant...Yeah, we know, tire sealants suck! Sealing punctures is not difficult. Doing so without corroding the wheels, throwing them out of balance, or creating a disgusting mess - that's the trick. The quantity needed depends on the tire width and size, please check <http://www.ride-on.com/calculator.html> for further information.

- Balances every kind of wheel perfectly
- No ugly wheel weights on wheels anymore
- Lasts the entire life of the tire
- Tire holds pressure longer
- No tire balancing procedure and glue stains anymore
- Works in the field without special machines
- Protects tire and prevents flats caused by punctures
