## ***Streamline Internal Throttle***

The internal throttle was standard issue on Harley production bikes in the past. Certain problems were always associated with these types of throttle controls, the biggest being a stuck throttle cable causing serious safety concerns. Austin engineered an internal throttle control that has revolutionized the technology and was even approved by the DOT. The secret lies in a series of bearings that help guide the mechanism and provide a smooth action and great "Snap Back". There is no welding, drilling, or tapping. The installer will need some simple tools like a hack saw and a file etc.(You must cut the handle bar as with all internal throttles).

## **Performance Machine Contour Belt Drive Primary 2"**

The PM Contour Belt Drive Primary has several key features that make it superior to other belt drives. The motor plate and lock up clutch are designed to tolerate the power of big motors. Clutch action at the lever is eased by use of lower rate springs, while the inertia activated lock up feature keeps things from slipping when the power is poured on. Completely replaces the stock primary and utilizes a narrow belt for lightweight, better cornering clearance and does not interfere with access to forward controls. Designed to integrate seamlessly with PM Mid Mount Controls. Will fit all 91-09 HD Softails, Dynas and many customs. Does not fit FLH or FXR models. Dyna models must use forward controls or the integrated PM mid Mounts on page 35. The Primary is available in chrome and Contrast Cut finishes. The Contrast Cut finish features a blacked out primary integrated with machined Contrast Cut covers and the same quality internals.
